

Stopline Trade Manager EZ MT5

From purchase to a running EA in five minutes.

YOU NEED**MetaTrader 5**

Installed and logged in to a broker account (demo is fine).

Your MQL5 login

User name and password of the account you bought with.

Five minutes

Nothing to download or copy.

01 Install in Six Steps

1 Sign In to MQL5 in MetaTrader

Tools > Options (Ctrl + O) > Community > click **If you have an account, please login**, enter your MQL5 login and password, press OK.

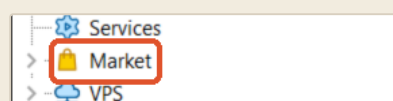

Use your MQL5 user name, not your e-mail, of the account you bought with. It ends your profile address: mql5.com/en/users/name.

2 Install the EA

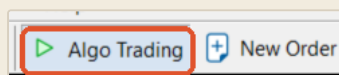

Bought in MetaTrader? It is installed already: go to step 3.

Bought on mql5.com, or on a new computer? Navigator (Ctrl + N) > Market > My Purchases > Install next to Stopline Trade Manager EZ MT5.

3 Turn On Algo Trading

Click **Algo Trading** on the toolbar (Ctrl + E). A green triangle means it is on.

4 Put the EA on a Chart

Open a chart of the symbol you trade. Navigator (Ctrl + N) > Expert Advisors > Market: drag **Stopline Trade Manager EZ MT5** onto the chart.

5 Tick Allow Algo Trading, Press OK

In the dialog that opens: **Common** tab > tick **Allow Algo Trading** > OK. Leave the **Inputs** as they are; the window changes the lot, the risk, the stops, the theme and the language later.

6 Check That It Runs

The EA's name with a **blue hat** shows in the top-right corner of the chart, and the window shows a **teal dot** next to the symbol. You are ready to trade.

02 Your First Trade

- 1 Risk:** type it in **Risk** (default 1% of the balance). The lot is calculated for you.
- 2 Stop:** type it in **SL**, or point at the orange SL line and drag its tab.
- 3 Send:** press **BUY** or **SELL** (a first press on the other side flips the lines).
- 4 Confirm:** check the details, press **Enter** (**Esc** cancels).

03 Stuck? Check These First

- **The EA is not in the Navigator?** Sign in with your MQL5 user name, not the e-mail (step 1), then install it from **My Purchases** (step 2).
- **Orange dot?** No connection to your broker (bottom-right corner of MetaTrader), or your daily loss limit is reached.
- **BUY and SELL greyed out?** A pending order type is selected: press the **M** (magnet) button on the window for a market order.
- **On a Mac?** Ctrl is the **Control** key, not Command; F7 may need **Fn**.
- **Orders refused, amber dot or grey hat?** Algo Trading is off: the toolbar button (step 3) and **F7** > **Allow Algo Trading** (step 5).
- **A line will not move?** Point at it until a tab appears, then drag the tab.
- **"Risk too small for the minimum lot"?** Raise the risk or widen the stop.
- **New computer or reinstall?** Steps 1–5 again (one activation).
- **Still stuck?** Ask in the **Comments** tab on mql5.com with your MT5 build (**Help** > **About**), broker, symbol and **Experts** log lines.

Everything else is in the **User Manual** (PDF): installation chapter 2, first trade chapter 3, messages and troubleshooting chapter 17.

Trading on margin carries a high level of risk. The EA manages your own trades; it gives no signals, advice or promise of results.
